Introduction

QIAGEN Digital Insights Admin Tool (QDIAT) is a platform that allows you to:

1. Manage your users and monitor your license(s)/sessions/usage
2. Single Sign-on (SSO) configuration

This platform manages the access to the following products

- HGMD – Human Genetic Mutation Database - <https://my.qiagendigitalinsights.com/bbp/>
- HSMD – Human Somatic Mutation Database - <https://my.qiagendigitalinsights.com/bbp/>
- COSMIC – Catalogue of Somatic Mutations in Cancer - <https://my.qiagendigitalinsights.com/bbp/>
- PGMD - PharmacoGenomic Mutation Database - <https://my.qiagendigitalinsights.com/bbp/>
- ANNOVAR - <https://my.qiagendigitalinsights.com/bbp/>
- Genome Trax™ - <https://my.qiagendigitalinsights.com/bbp/>
- QCI – QIAGEN Clinical Insights – <https://variants.qiagenbioinformatics.cn/qci/>
- IPA – Ingenuity Pathway Analysis – <https://analysis.qiagenbioinformatics.cn/pa/installer/select>

QDIAT allows you to look up which licenses users have within your organization, control access to products by adding or removing users, look up who is currently logged in, and monitor when licenses expire.

Access to QDIAT

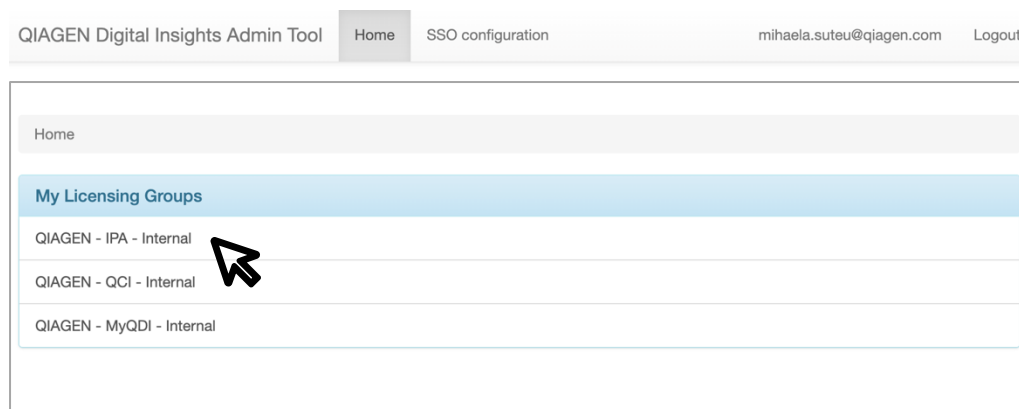

If you are a license coordinator for any of these products, log in at <https://apps.qiagenbioinformatics.cn/iat/> with your username and password.

If you are the license coordinator and cannot access QDIAT please contact customer support via TS-Bioinformatics@qiagen.com and request a QDIAT license. Please note, a license to your product can be managed by more than one administrator. If you wish to add/remove administrators, you must contact Customer Support. Administrators do not need to be members of the License Group (individual users that have access to a licensed product).

How to use QDIAT

License Administrator/License Coordinator: this is the administrator at the institution who is authorized to make changes to the licenses/users.

Once logged in, QDIAT displays on the home page the list of active licensing groups. From here you can administer more than one product license. To do this, you will need to choose which license you want to access after you log into QDIAT. In the example shown below, the license administrator can manage two different licenses, and must select one before continuing.

Once a license group is selected, the top menu will display the following tabs: Users and "Ingenuity Pathway Analysis" with the following submenu: Licenses, Sessions and Usage.

Home

My Licensing Groups

SSO Config for Demo

User Management

In the *Users* tab for QDIAT you will find 3 sections; (1) Administrators, (2) Add New Users to Licensing Group, and (3) Users in Licensing Group. These sections are described in more detail below.

QIAGEN Digital Insights Admin Tool | Users | About | mihaela.suteu@qiagen.com | Logout

Home / QIAGEN - IPA - Internal / Users

All users listed in the Users tab belong to the license groups and have access to all applications shown.

Add Users to Licensing Group (2)

Search Users | Create Account

Search and add existing accounts to the licensing group.

User account email address or addresses

Enter one or more email addresses or search on one partial address.

Search

Administrators (1)

Username	Name	Admin Type
christine.bueno@qiagen.com	Christine Bueno	SSO
cristian.balint@qiagen.com	Cristian Balint	SSO
mihaela.suteu@qiagen.com	Mihaela Suteu	License
roslen.anacleto@qiagen.com	Roslen Anacleto	SSO
sachin.pattanshetty@qiagen.com	Sachin Pattanshetty	SSO
stuart.tugendreich@qiagen.com	Stuart Tugendreich	SSO

1 Administrators

Displays a list of administrators that can manage the access of users to the product. This list is managed by Customer Support. If you wish to add/remove administrators, you must contact Customer Support via TS-Bioinformatics@qiagen.com.

2 Add New Users to Licensing Group

It is possible that users within your organization possess licenses for other QIAGEN Digital Insights products and are already registered within the QIAGEN licensing system. If this is the case, you can simply search in the "Add User to Group" section to see if the user has an account, as

shown below. Note that in the screenshot below the search is performed using the organizational email address.

Add Users to Licensing Group

Search User [Create Account](#)

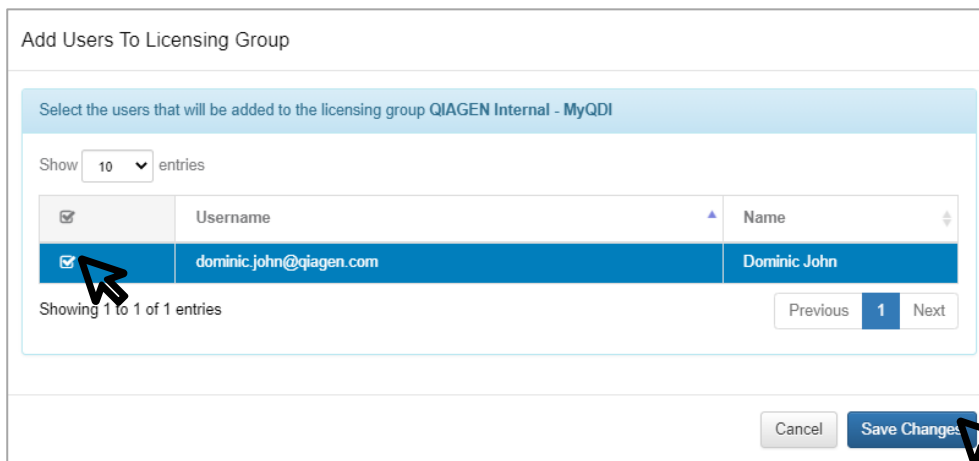

Search and add existing accounts to the licensing group.

Dominic.John@qiagen.com

Enter one or more email addresses or search on one partial address.

Search

If the user exists within QIAGEN's licensing system a window will pop-up displaying the user details. You can then select the user to be added to this license group. Click on "Save Changes" to finalize the process and user will receive a "Welcome" email with a link to access this product.

Add Users To Licensing Group

Select the users that will be added to the licensing group **QIAGEN Internal - MyQDI**

Previous 1 Next

Cancel **Save Changes**

If the user is not found, you can create a user account for that user. To add a user to your license group, click on "Create Account", fill in the required information, and click "Add to License".

Add Users to Licensing Group

[Search Users](#)

Create new account and add it to the licensing group.

Institutional Email Address

First Name

Last Name

Institution or Company Name

The license does not have a domain or the user's domain is not configured for SSO. Please select a value from autocomplete dropdown.

Enable SSO

When entering the Institution or Company name, suggestions will appear via autocomplete. Please try to use one of these names if applicable. If the institution or company is not listed, then type in the name.

Checking the *Enable SSO* checkbox will enable the account to login via the institution's Identity Provider. If the checkbox is in read-only mode, this means there is no SSO configured for your domain's institution.

After a moment, you will see a confirmation that the user was created and added to your license group. The user will then receive a "Welcome" email to activate account, set password and link to access this product.

Add Users to Licensing Group

The new account was successfully created and added to the licensing group. ✕

Create new account and add it to the licensing group.

Institutional Email Address

First Name

Last Name

3a Users in License Group

This section displays users in your license group for your product. The table is searchable by email, name, and the date they were added to the license. A filter can be applied to view only the users in the license group having SSO enabled.

If an account has SSO enabled then a key icon will be displayed near the username.

The list of users can be exported in a xls or xlsx file format.

Users in Licensing Group 3

Show only users with SSO Export users as: XLS | XLSX

Show 10 entries

Search Username	Search Name	Search Date
<input type="checkbox"/> Username	<input type="checkbox"/> Name	<input type="checkbox"/> Added Date
<input type="checkbox"/> aarthigoverdhan@qiagen.com	Aarthi Goverdhan	Nov 04 2021
<input type="checkbox"/> aavishkar.ghosh@qiagen.com	Aavishkar Ghosh	Sep 20 2022
<input type="checkbox"/> ada.cean@contractor.qiagen.com	Ada Cean	Nov 19 2020

3b Remove Users from License Group to End Access.

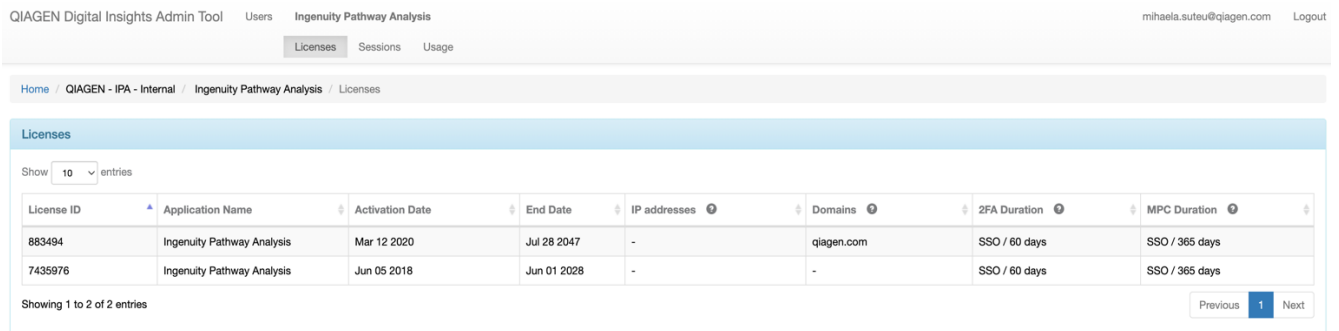

To remove users from your license, first check the box to the left of the member(s) you wish to remove and then click on the "Remove From Licensing Group" button.

Once you remove a user from a specific licensed product, any active session for that person is immediately terminated and he or she will not be able to access this specific product.

License Management

The *Licenses* tab displays the start and end date of active license(s) for the license group.

If the license restricts usage from specific IP addresses, those will be listed. Then all sessions on this license must originate from these IP addresses. This is the institutional/building IP address as seen by the rest of the world. This is not the IP address on the user's computer.

Please note, only users from the specified domains can use your license, which are the email domains belonging to the institution that bought the license (e.g. qiagen.com).

Security settings defined on the license are also displayed here. These can be custom defined values or default ones provided by the system.

The two factor authentication duration column lists the duration for which a 2FA token is valid for, it applies to users that are not on SSO. If the license group contains both users that are on SSO login and users that are not on SSO, then the 2FA setting will be displayed as a combination.

The mandatory password change duration column lists the duration for which a password is valid for, after which the system will request to be changed with a new one. It applies to users that are not on SSO. If the license group contains both users that are on SSO login and users that are not on SSO, then the MPC setting will be displayed as a combination.

Sessions

Viewing who is currently logged into your license group.

Go to the *Live Sessions* section, which provides a list of users who are currently logged into your license. You can see how long they have been using the license in the current session and you can terminate that session if necessary (see below). Note that all times listed are in the PST time zone.

The screenshot shows the 'Sessions' page in the QIAGEN Digital Insights Admin Tool. The breadcrumb trail is: Home / QIAGEN - IPA - Internal / Ingenuity Pathway Analysis / Sessions. The page is divided into two main sections: 'License Details' and 'Live Sessions'.

License Details:

- License ID: 822409
- Max. Concurrent Users: 100

Live Sessions:

Show 10 entries

Showing 0 to 0 of 0 entries

Previous Next

Terminating an active session

In the *Live Sessions* section, you can click the terminate button to the right of the user whose session you wish to terminate. Please use this option only in urgent situations, as it will potentially interrupt the user's work. We recommend that you contact the user before terminating their session.

Viewing failed sessions

The *Failed Sessions* section provides a list of users who could not use the application. It states the cause why the user could not access the application.

Failed Sessions

Previous 1 Next

① License Usage

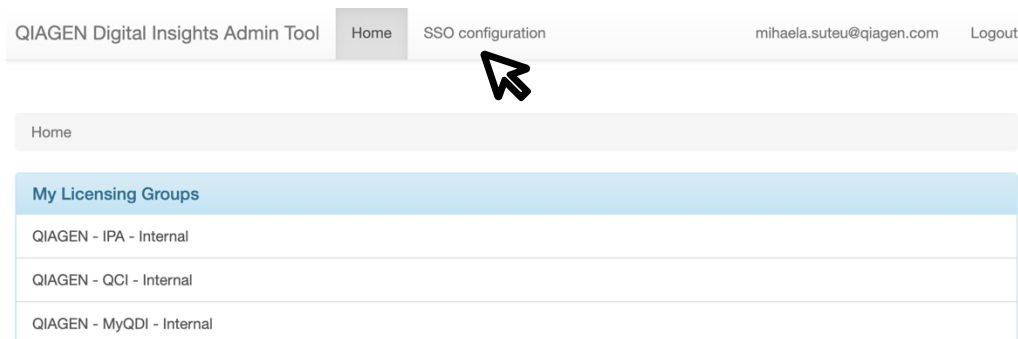

This section shows you the activation and end date of your IPA license. If your IPA license is limited by consumption, its usage is noted in the table. In the above example, the Group has a limit of 100 Dataset Uploads of which 2 have been consumed by some Group members.

② User Usage for Sample Upload

This table displays the number of uploads consumed per user within the Group. From this table you can see the individual consumption rate.

SSO Configuration

The SSO Configuration tab allows the SSO Administrator to configure SSO for his/her company and to manage users by enabling/disabling the SSO process for them.

SSO Administrator: this is typically the buyer's IT person who configures and manages the institutions single sign-on with QDI's product offerings. To configure SSO for your institution reach out to TS-Bioinformatics@qiagen.com. We support multiple SSO Administrators.

Qiagen Digital Insights is an identity provider that offers authentication with security measures such as complex passwords, password expiration, 2 factor authentication. One user account in our identity store can access all QDI products as listed above in the Introduction.

Customers have the option to use their own identity provider for authentication through QDI's Single Sign-on (SSO). SSO allows you to login using your company credentials. Qiagen's SSO is based on SAML 2.0, more specifically, the Service Provider-Initiated SAML Flow.

Once SSO is configured, the SSO Administrator is responsible for all communication and authentication related issues/queries for their users.

Prerequisites

- Send a request to TS-Bioinformatics@qiagen.com
 - with first name, last name, and email ID of the SSO Administrator
 - list of domains for SSO

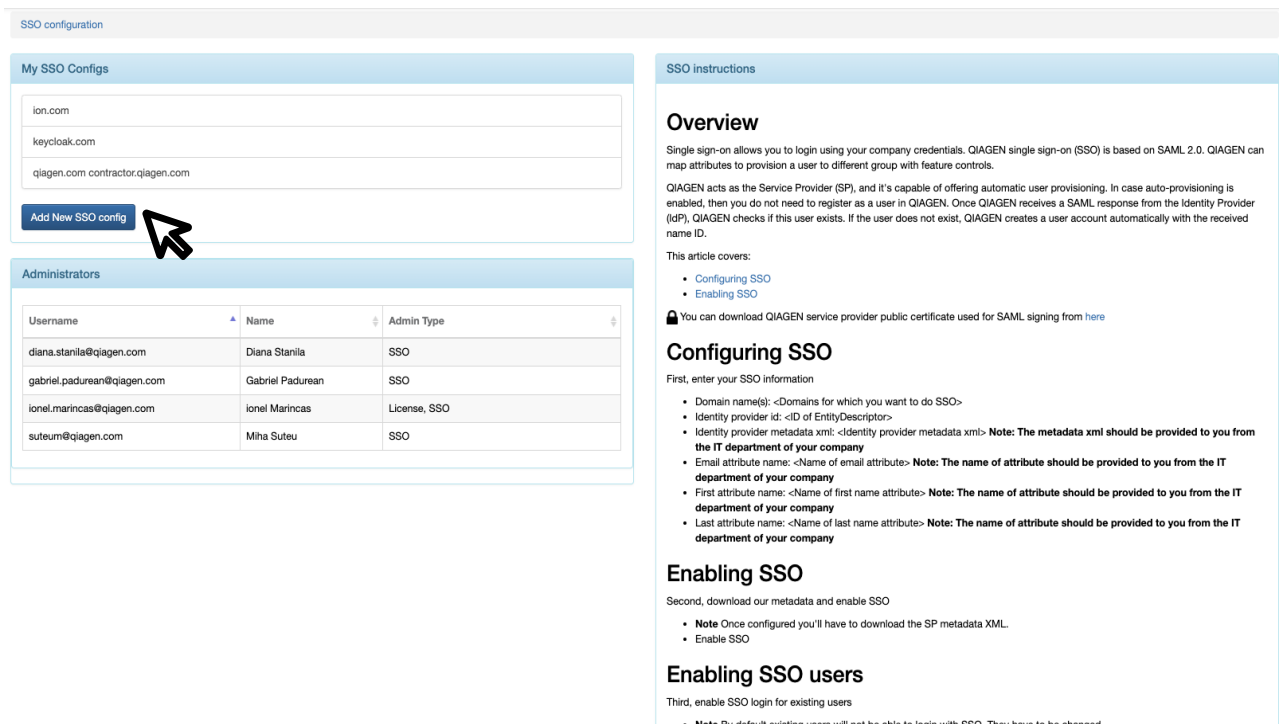

An SSO administrator will be created by the QDI customer support team and in order to gain access to the SSO configuration tab, a special license will be assigned.

Creating a new configuration

On the right side panel you can find detailed instructions on how to create and setup a new SSO configuration for your company.

On the left side panel, in the *My SSO Configs* section you will find a list of your current SSO configurations. You can click on the *Add new SSO config* to create a new one.

There is also a table that lists all the administrators defined on the group.

The screenshot displays the SSO configuration interface. On the left, the 'My SSO Configs' section shows a list of domains: ion.com, keycloak.com, and qiagen.com contractor.qiagen.com. Below this list is a blue button labeled 'Add New SSO config' with a mouse cursor pointing to it. Below the button is the 'Administrators' section, which contains a table with the following data:

Username	Name	Admin Type
diana.stanila@qiagen.com	Diana Stanila	SSO
gabriel.padurean@qiagen.com	Gabriel Padurean	SSO
ionel.marincas@qiagen.com	ionel Marincas	License, SSO
suteum@qiagen.com	Miha Suteu	SSO

On the right side of the interface, the 'SSO instructions' panel is visible. It includes an 'Overview' section with an introduction to SSO, a list of topics covered (Configuring SSO, Enabling SSO), and a link to download the service provider public certificate. Below this is the 'Configuring SSO' section, which provides instructions on entering SSO information, including domain names, identity provider ID, and metadata XML. The 'Enabling SSO' section follows, detailing the steps to download metadata and enable SSO. Finally, the 'Enabling SSO users' section provides instructions on enabling SSO login for existing users, with a note that existing users will not be able to login with SSO by default.

There are three steps for setting up a new SSO configuration.

SSO Config: step 1

The configuration step requires you to choose one or multiple domain(s). The available domains are the ones setup by customer support at the time the SSO administrator was created. If you cannot find the domain you are looking for please reach out to customer support for any changes. Please observe the instructions on the right side panel for the information required in the form.

QIAGEN Digital Insights Admin Tool Home SSO configuration demossoadmin@demodomain.com Logout

SSO configuration / Create SSO Config

1 **Configure SSO** 2 Enable SSO configuration 3 Enable SSO users

Create SSO configuration for domain(s)

Domain Name(s)

demodomain.com

- demodomain.com
- test.com
- qiagen.com
- contractor.qiagen.com
- keycloak.com

Email attribute name

Eg: http://schemas.xmlsoap.org/ws/2005/05/identity/claims/emailaddress

Enter name of attribute for email address sent in SAML response.

First name attribute name

Eg: http://schemas.xmlsoap.org/ws/2005/05/identity/claims/givenname

Enter name of attribute for first name sent in SAML response.

Last name attribute name

Eg: http://schemas.xmlsoap.org/ws/2005/05/identity/claims/surname

Enter name of attribute for last name sent in SAML response.

Automatic user provisioning

When this will be checked users will be automatically assigned to unlimited site licenses.

Configuring SSO

First step

Enter your SSO information here

- Domain name(s): <Domains for which you want to do SSO>
- Identity provider id: <ID of EntityDescriptor>
- Identity provider metadata xml: <Identity provider metadata xml> **Note: The metadata xml should be provided to you from the IT department of your company**
- Email attribute name: <Name of email attribute> **Note: The name of attribute should be provided to you from the IT department of your company**
- First attribute name: <Name of first name attribute> **Note: The name of attribute should be provided to you from the IT department of your company**
- Last attribute name: <Name of last name attribute> **Note: The name of attribute should be provided to you from the IT department of your company**

If the *Automatic user provisioning* is checked this means that all new users signing in to Qiagen via your company's identity provider will gain access to the Qiagen products by having accounts automatically created in the Qiagen system and added to your license group.

SSO Config: step 2

The 2nd step allows you to preview the configuration, choose the license group for auto provisioning and enable the SSO configuration. After selecting the domain(s) a service provider metadata URL will get displayed and it will allow for the QIAGEN metadata data file to be downloaded locally. This is also the step from which an existing SSO configuration can be disabled by clicking on the *Disable* button. A right side panel is also available with more information on this.

SSO instructions

Overview

Single sign-on allows you to login using your company credentials. QIAGEN single sign-on (SSO) is based on SAML 2.0. QIAGEN can map attributes to provision a user to different group with feature controls.

QIAGEN acts as the Service Provider (SP), and it's capable of offering automatic user provisioning. In case auto-provisioning is enabled, then you do not need to register as a user in QIAGEN. Once QIAGEN receives a SAML response from the Identity Provider (IdP), QIAGEN checks if this user exists. If the user does not exist, QIAGEN creates a user account automatically with the received name ID.

This article covers:

- Configuring SSO
- Enabling SSO

You can download QIAGEN service provider public certificate used for SAML signing from [here](#)

Configuring SSO

First, enter your SSO information

- Domain name(s): <Domains for which you want to do SSO>
- Identity provider id: <ID of EntityDescriptor>
- Identity provider metadata xml: <identity provider metadata xml> **Note: The metadata xml should be provided to you from the IT department of your company**
- Email attribute name: <Name of email attribute> **Note: The name of attribute should be provided to you from the IT department of your company**
- First attribute name: <Name of first name attribute> **Note: The name of attribute should be provided to you from the IT department of your company**
- Last attribute name: <Name of last name attribute> **Note: The name of attribute should be provided to you from the IT department of your company**

Enabling SSO

Second, download our metadata and enable SSO

- Note Once configured you'll have to download the SP metadata XML.
- Enable SSO

Enabling SSO users

Third, enable SSO login for existing users

- Note By default existing users will not be able to login with SSO. They have to be changed

SSO Config: step 3

The 3rd step allows you to move users between two lists: one that is SSO enabled – meaning that users will sign in using your company identity provider and the other which is SSO disabled meaning that users will continue to sign in via Qiagen system.

In order to do this, you need to click on the checkbox next to the username and then use the arrows highlighted below to submit the action. The left and right side lists will refresh automatically after this.
